

## **Examination Questions on obstetrics to Interview the forth-year students of the Therapy Department**

1. Diagnostic of clinically contracted pelvis.
2. Amniotic fluid embolism (causes, diagnostic, management).
3. Structure of afterbirth.
4. Late postpartum hemorrhage (causes, management).
5. Gymnastic in puerperium.
6. Causes onset of labor.
7. Mechanism of labor in occipito-anterior position.
8. Signs of mature fetus.
9. Fetal circulation.
10. Examinations of woman in childbirth in maternity hospital before labor.
11. Asphyxia of newborn and resuscitation.
12. Dilation of cervix in nulliparous and multiparous.
13. Basic obstetrics terms.
14. Signs of mature fetus. Anatomical diameters of the fetal head.
15. Definition of fetal well-being.
16. Obstetric pelvis.
17. Care for human breast in puerperium.
18. Diagnosis of pregnancy in different terms.
19. Clinic of gestosis.
20. V.V. Stroganov – distinguished obstetricians.
21. Induction of labor: indications, methods.
22. Contemporary principles of management of gestosis.
23. Vomiting of pregnancy. Etiology, management.
24. Brow presentation.
25. Aseptic and antiseptic in obstetric practice.
26. Labor pains and labor pushing.
27. Structure of maternity hospital.
28. Puerperal metroendometritis.
29. Maternal diet and hygiene at pregnancy.
30. Clinical anatomy of female genital tract.
31. Vaginal examination during labor: indications, technique.
32. Patient evaluation and examination at hospital admission.
33. Changes in women organism during pregnancy.
34. Big fetus delivery.
35. Structure and function of pelvic floor.
36. Placenta. Umbilical cord. Amniotic fluid.
37. Removal of separated placenta.
38. Female dispensary: main tasks of working.
39. Polyhydramnion and oligohydramnion. Clinic, diagnostic, management.
40. Oblique and transverse fetal positions. Outcomes for mother and fetus. Management of labor on transverse fetal position.
41. Reception ward of maternity hospital.
42. Mamma's pathology in puerperium.

43. Umbilical cord prolapse and prolapse of fetus' extremities (causes, diagnostic, management of labor).
44. Mechanism of breech delivery.
45. Neglected transverse lie of the fetus. Management of labor. Prevention.
46. Classification of puerperal diseases. Prevention.
47. Management of labor in women with congenital heart defects.
48. Main principles of management of puerperal septic diseases.
49. Management of contracted pelvis delivery.
50. Premature delivery. Etiology and prevention. Principles of management.
51. Management of normal puerperium.
52. Asphyxia of newborn (clinic, Apgar score).
53. Threatened abortion. Imminent abortion. Causes. Diagnostic. Management.
54. Dropsy of pregnancy: clinical signs, diagnostic, management and prevention.
55. Face presentation.
56. Preterm infants. Care and feeding of preterm infants.
57. Cesarean section: indications and modifications of cesarean section.
58. Craniotomy. Indications. Conditions. Techique.
59. Transverse fetal positions (management of labor).
60. Obstetrical assessment of the labor in vertex presentation.
61. Mechanism and purpose of obstetrical forceps.
62. Classification of contracted pelvis according to the form and degree of contraction.
63. Spontaneous abortions. Causes. Management. Prevention.
64. Postpartum hemorrhages due to defective coagulaton (clinic, diagnostic, management).
65. Threatened rupture of perineum (clinic and prevention).
66. Generalized septic infection in puerperium.
67. Course and management of the 3<sup>rd</sup> stage of labor.
68. Mechanism of placental separation.
69. Management of perineal incisions.
70. Nephropathy of pregnancy. Clinic and management.
71. Course and management in puerperium.
72. Ruptures of vagina and perineum. Etiology, prevention, management.
73. Causes of uterine bleedings after child delivery.
74. Multiple pregnancy. Clinic and diagnostic. Management of labor.
75. Urogenital and intestinal fistulas. Etiology and prevention.
76. Abnormal uterine action.
77. Face presentation. Mechanism of labor and management.
78. Uterine atony and postpartum hemorrhage.
79. Prenatal care in maternity hospital.
80. Extraction of fetus on breech delivery.
81. Obstetric forceps. Conditions, indications, technique of operations.
82. Technique of manual removal of afterbirth.
83. Puerperal parametritis and thrombophlebitis.
84. Premature rupture of amniotic fluid sac (causes, complications for women and fetus).
85. Diagnostic and management of missed miscarriage.
86. Assessment of fetal well-being.
87. Pelvis justo minor. Mechanism of labor. Management of labor.
88. Third-trimester bleeding.

89. Signs of clinically contracted pelvis. Management of labor.
90. Immunologic disorders in pregnancy.
91. Placenta accreta (causes, diagnostic, management).
92. Clinic signs of eclampsia. Management and prevention. Findings at autopsy in eclampsia patients.
93. Mechanism of labor in occipito-posterior position.
94. Signs and management of antepartum asphyxia.
95. Ruptures of uterus. Etiology and prevention.
96. Postdate pregnancy and delayed labor.
97. Pathologies of afterbirth stage. Causes of placental separation.
98. Dyscoordinated labor activity. Diagnostic, management.
99. Placenta previa. Clinic, management.
100. Prevention of uterus' ruptures.
101. Primary powerless labor. Diagnostic and management.
102. Tsovianov maneuver at breech delivery.
103. Appendicitis and pregnancy.
104. Complications after cesarean section.
105. Clinically contracted pelvis.
106. Contemporary principles of management of gestosis.
107. Prevention and management of eclampsia.
108. Management of nephropathy.
109. Transverse and oblique fetal positions. Course and outcomes of labor.
110. Obstetric analgesia. Use of medications, electroanalgesia, acupuncture.
111. Clinic and management of placental abruption.
112. Prevention and management of uterus' ruptures.
113. Decapitation (indications, conditions, technique).
114. Flat pelvis. Mechanisms of labor.
115. Management of the second stage of labor.
116. Diagnostic of early terms of pregnancy.
117. Puerperium. Course and management.
118. Pregnancy and congenital heart diseases.
119. Newborn care.
120. Perineal dissection. Indications. Management after delivery.
121. Management of breech delivery.
122. Retained parts of placenta (causes, clinic, management).
123. Essential hypertension and pregnancy.
124. Prenatal education classes.
125. Maternity leave.
126. Course and management of second stage of labor.
127. Dropsy of pregnancy. Clinic, diagnostic, management.
128. Aseptic and antiseptic in obstetrical practice.
129. Management of acute anemia in obstetrical practice.
130. Mechanism of delivery on flat pelvis.
131. Methods of estimating fetal weight before labor.
132. Blood transfusion in obstetric practice.
133. Ruptures of cervix (causes, diagnostic, management).
134. Medical indications for artificial abortion.
135. Cephalohematoma.

136. Craniotomy. Indications. Conditions. Technique.
137. Signs of preterm infant.
138. Structure of maternity hospital.
139. Neonatal injuries associated with labor.
140. Amniotic fluid embolism.
141. Placenta accreta and placenta percreta.
142. Congenital anomalies.
143. Nausea and vomiting at pregnancy. Clinic, diagnostic, management.
144. Threatened and imminent abortion.
145. Diagnostic of antepartum asphyxia.
146. Premature rupture of membranes. Causes. Complications. Prevention.
147. Threaten rupture of uterus.
148. Physical examinations of newborn in the delivery room.
149. Secondary powerless labor.
150. Clinic and management of premature delivery.
151. Dyscoordinated labor activity.
152. Amniotomy (indications, technique).
153. Hydatidiform mole. Clinic, diagnostic, management.
154. Diabetes mellitus and pregnancy.
155. Placenta previa: etiology, diagnostic, management.
156. Pregnancy and labor after surgical treatment of heart diseases.
157. Perinatal centers.
158. Amniotic fluid. Indications for amniotomy.
159. Artificial induction of labor. Indications for induction of labor.
160. Role of female dispensary in prevention of gestosis.

Head of obstetrics  
and gynecology chair      L.V. Gutikova
